

SKILLS

ENGINEERING SOFTWARE

Siemens NX

3D Modeling · Assembly & Constraints · Drafting · Mechanical Component Design · CAD File Exchange

ANSYS Mechanical

Static Structural · Stress & Deformation Evaluation · Safety Factor Assessment · Basic Thermal Analysis

AUTOMOTIVE ENGINEERING

OBD-II CAN Fundamentals

Sensor Integration DSP Concepts

MATLAB/Simulink

PROGRAMMING

Python / C++

Basic engineering-use level for data processing, signal filtering and task automation.

AI-ASSISTED ENGINEERING

Uses AI tools to learn unfamiliar software, troubleshoot CAD/CAE workflows, support coding and technical research; outputs are manually reviewed and verified.

WORKING STYLE

Adaptable & proactive

Comfortable learning unfamiliar engineering software and workflows.

Hands-on & field-oriented

Comfortable investigating real equipment on site.

Enthusiastic & collaborative

Responsive, responsible and willing to support team work.

Careful with outputs

Verifies engineering and AI-assisted results before use.

LANGUAGE

English

IELTS 6.5

PROFESSIONAL SUMMARY

Hands-on Automotive Engineering profile combining vehicle systems, CAD/CAE, field investigation, diagnostics and AI-assisted technical workflows with manual review and verification.

PROFILE

Automotive Engineering student at Ho Chi Minh City University of Technology (HCMUT) with fundamentals in vehicle systems, powertrain, vehicle electrical/electronic systems and diagnostics. Focused on R&D for construction equipment and vehicle monitoring, using Siemens NX/ANSYS for mechanical design and analysis, OBD/CAN and sensors, with basic Python/C++.

CURRENT R&D PROJECT

FuelGuard

Fuel monitoring and equipment-health system for construction machinery, combining sensor data, vehicle diagnostics, mechanical integration and field validation under vibration, dust and uneven-terrain constraints.

Fuel Monitoring Vehicle Diagnostics Sensor Integration CAD/CAE Field Validation

EXPERIENCE

R&D – Vehicle Monitoring & Diagnostics

2025 – Present

Thinh Kim Co., Ltd.

FuelGuard system development for construction machinery, from field survey to monitoring workflow.

Siemens NX mechanical component and sensor-mount design for vibration, dust and installation constraints.

ANSYS-based structural checks for stress, deformation, material strength and basic thermal response.

Basic Python/C++ and signal-processing support for fuel-level filtering and analysis.

OBD/CAN, ECU, electrical-system and sensor investigation for integration.

On-site equipment surveys to identify diagnostic ports, electrical components, service access and feasible installation points.

EDUCATION
