

NGO QUANG KIET

AUTOMOTIVE ENGINEERING STUDENT

ngokiet1412@gmail.com | +84 909 224 702 | Ho Chi Minh City, Vietnam
ngokiet1412-web.github.io/portfolio | github.com/ngokiet1412-web

PROFILE

Automotive Engineering student at HCMUT with hands-on exposure to field investigation, Siemens NX, ANSYS Mechanical, vehicle diagnostics and sensor-oriented R&D. I connect real evidence with modeling, engineering checks and practical validation planning.

EXPERIENCE

R&D - Vehicle Monitoring & Diagnostics

Thinh Kim Co., Ltd. | 2025 - Present

- Advance FuelGuard from field surveys toward a monitoring workflow for construction machinery.
- Support mechanical integration and analysis-oriented checks with Siemens NX and ANSYS under field constraints.
- Research diagnostic and sensor integration around OBD/CAN, ECU/electrical systems and controller I/O.

SELECTED ENGINEERING WORK

FuelGuard - Integrated R&D Project

Connect field evidence, CAD/CAE, prototype electronics, data handling and validation planning in one traceable workflow.

ROBEX & HAMM Field Investigation

Record service access, routing, dust/vibration exposure and packaging constraints on real machines, then translate observations into design requirements.

Versioned Engineering Workflow

Keep sources, decisions, code and reports traceable in GitHub with explicit review gates and human verification.

EDUCATION

Ho Chi Minh City University of Technology (HCMUT)

**Automotive Engineering program
| 2023 - Present**

Vehicle systems, powertrain, electrical/electronic systems and diagnostics.

TECHNICAL FOCUS

Mechanical Design

Siemens NX; 3D modeling; assembly structure

Engineering Simulation

ANSYS Mechanical; structural screening; basic thermal evaluation

Vehicle Systems

Diagnostics; OBD/CAN research; sensors; controller I/O

Engineering Workflow

Field investigation; evidence traceability; GitHub; technical documentation

WORKING METHOD

- Field-oriented
- Evidence-led decisions
- Cross-domain integration
- Human verification
